

ATLAS ROBOTICS - ORION TECHNICAL ARCHITECTURE

Synthetic technical reference for retrieval and multi-evidence tests.

Perception and safety

ORION uses the Vector-X perception architecture.

The safety controller is Sentinel-2.

The edge-compute power cap is 45 W.

Model runtime

The deployed perception model is FalconNet-S.

The model is executed on the EdgeBox M4 device.

ATLAS ROBOTICS - ORION TECHNICAL ARCHITECTURE

Messaging and persistence.

Data services

Telemetry is persisted in PostgreSQL 16.

Device events are transported over MQTT 5.

The architecture separates safety control from model inference.
